

Delta ERP Intranet - Summary

Delta intranet ERP, an **integrated application**, in **English** and **Romanian languages**, which fulfills the function of **ERP** (Enterprise Resource Planning), developed and improved over more than ten years, is a software solution for the management of a company or institution, easy access to any type of information from a unique database, with the ability to process a large volume of data.

Solution for the core processes of business

- input/output document control
- company or organization approval process for internal documents - requests, notices, reviews, etc.
- quality management system
- project management
- contract management
- task management
- production management
- stock management
- communication - notices, instructions, reports and reports, alerts, etc.
- accounting
- etc.

Delta intranet ERP Core modules are a minimum package of modules strictly necessary to operate **Delta intranet ERP Enterprise** and **Delta intranet ERP Organization** applications, allowing internal communication, structuring information, workgroups or departments, etc.

Delta intranet ERP Basic package comprises, in addition to **Delta intranet ERP Core** modules, several **standard modules** and/or **optional customizable modules**.

Delta intranet ERP Enterprise application package is a complete solution for business management in a company or organization using an intranet system, which fulfills the function of ERP (Enterprise Resource Planning), developed and improved over more than decade. With a modular architecture and a single database, the system can be structured to the needs of any user group, being possible to build an own custom system. Besides **Delta intranet ERP Core** modules, this package contains **standard modules** (including accounting) and **optional customizable modules**.

Delta intranet ERP Organization application package is a solution for managing an organization with geographically distributed units and contains applications for communication between the central headquarter and the units in the territory, and within them, helping to increase staff productivity, manage structured information,

access to values the knowledge of the organization. Besides **Delta intranet ERP Core** modules, this package contains **standard modules** (including accounting) and **optional customizable modules**.

Our method is to tail (adapt and customize) the modules to the company or organization activity, not to compel the company or organization to adapt their activity to the facilities offered by applications.

Architecture solution is **web-based client-server**, using **IBM Notes Domino** software server, and **Delta intranet ERP** software. Real-time communication between users is achieved via **Instant e-Mail** module and other specific modules.

General benefits and functionalities

- It integrates **all processes within a company or organization** into a **single system** and a **single database**, resulting a **custom system**, personalized.
- The application can be **accessed from any terminal connected to the Internet** (computer, tablet, smartphone) with a **web browser**.
- Provides **easy document handling** and **quick access to information**, to increase productivity - content adding, retrieval, distribution, processing.
- Ensures availability of information, providing a **high degree of security** and **confidentiality**.
- It **eliminates the costs of any other communication**, the need to purchase **paper** and **storage space**.
- Documents can be **stored permanently** or **temporarily**.
- Provides fast and efficient **search** mechanisms, according to **complex criteria**, for all information in the system.
- Access is based on **username** and **password**. It is possible to add a **PIN** which is automatically generated and sent by phone after each login.
- It can work in secure mode (**https**) and under **VPN**.
- Users are structured on **roles**, allowing differentiated access to information.
- Being made modular, this system **can be structured to the needs of each group**.
- The modules are developed in **Romanian** and/or **English languages** and use **HTML5** and **CSS3** elements.

The proposed platform, **IBM Notes and Domino** is the ideal solution for intranet communication and document management in a cost-effective performance, be it a workgroup, department or a geographically distributed organization.

IBM Notes and Domino (formerly IBM Lotus Notes Domino) software is different from any other application, there are no equivalent products to compare it to.

Notes platform was introduced in 1989 by Lotus Development Corporation. In 1995 IBM paid \$3.5 billion for this company.

There are about **312 million** IBM Notes and Domino **users in 2016** in the world, and an average growth rate of 8% (according to IBM Lotus Notes/Domino Market Analysis, 2010-2014), it was estimated that there were 266 million users in 2014.

Methods of acquisition

- **Traditional licensed software** - hardware infrastructure and IBM Notes and Domino license will be provided by the beneficiary.
- **Open Value Subscription (OSV - renting or leasing software) on the hardware of the beneficiary** - IBM Notes and Domino license will be provided by the beneficiary and the application will be provided based on an annual payment. The OVS contracts will be signed for a period of 5-10 years. At the end, the customer has options to extend the contract, to acquire traditional licenses or dropping out entirely the software rent.
- **Software as a Service (SaaS)** - the beneficiary will receive **access** to the application as a **service**, with monthly or annual payment on a dedicated server with IBM Notes and Domino licenses located in an **IBM data center**.
